Office Action Summary

Application No.

09/251,480

Applicant(s)

AMJADI, KAMRAN

Examiner

Khanh Dinh

Art Unit

2155

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 30 September 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-21 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

1. This is in response to the Request for Continued Examination (paper # 24) and Amendment B (paper # 25) filed on 9/30/2003. Claims 1-21 are presented for examination.

Claim Rejections - 35 USC ' 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over MacNaughton et al US pat. No.5,796,393 in view of Paul US pat. No.5,999,932.

As to claim 1, MacNaughton discloses a method performed by a server (18 fig. 1) for accessing incentives in a network, comprising:

receiving an access request froth a device associated with a user and connected to the network and transmitting identifying information of at least one of the subscriber identification and a server identification (i.e., each community is identified by a text name and an identification number and has an associated port number through a interaction between a Community Client and a server, see col.9 lines 1-41) corresponding to the access request to a host (see abstract, fig. 1, col.3 line 8 to col.4 line 32 and co1.5 line 13 to co1.6 line 24);

receiving incentive information from the host reflecting available incentives corresponding to the identifying information, and transmitting a network document, including the incentive information of at least one of the subscriber identification and a server identification (i.e., each community is identified by a text name and an identification number and has an associated port number through a interaction between a Community Client and a server, see col.9 lines 1-41), to the device associated with the user in response to the access request (see co1.6 line 25 to co1.7 line 61 and col.8 lines 10-65).

MacNaughton does not specifically disclose the identifying information to filter the available incentives based on an exclusion or inclusion list. However, Paul discloses a filter using inclusion and inclusion list (see abstract, figs.1, 6, col.3 line 20 to col.4 line 27 and col.8 line 17 to col.9 line 67). It would have been obvious to one of the ordinary skill in the art at the time the invention was made to implement Paul's teachings into the computer system of MacNaughton to eliminate unsolicited information because it would have enabled users to eliminate unwanted messages or data information (see Paul's col.2 lines 2-48).

As to claim 2, MacNaughton discloses receiving a request for a document stored at least in part on the server (see co1.6 line 25 to co1.7 line 61).

As to claim 3, MacNaughton discloses determining whether an indication exists that the user subscribes to receive information of at least one of the subscriber identification and

a server identification associated with available incentives (see co1.7 line 14 to co1.8 line 65 and col.9 lines 1-41).

As to claim 4, MacNaughton discloses determining whether an indication exists that the user subscribes to receive information of at least one of the subscriber identification and a server identification associated with available incentives, includes: transmitting a subscriber request to the device associated the user; and receiving a response from the device associated with the user, including a subscriber identification (i.e., user ID memberships, see co1.8 line 10 to col.9 line 41).

As to claim 5, MacNaughton discloses transmitting a subscriber identification corresponding to the device associated with the user to the host and a server identification corresponding to the server (login IDs, see fig.2, co1.8 line 10 to co1.10 line 67 and col.11 line 13 to col.12 line 41).

As to claim 6, MacNaughton discloses receiving incentive information reflecting a selection of incentives based on at least one of the subscriber identification and the server identification (see fig.2, co1.8 line 10 to col.10 line 67 and col.11 line 13 to co1.12 line 41).

As to claim 7, MacNaughton discloses transmitting a subscriber identification corresponding to the device associated with the user to the host (see fig.2, co1.8 line 10 to co1.10 line 67 and col.11 line 13 to col.12 line 41).

As to claim 8, MacNaughton discloses a computer-implemented method for accessing incentives in a network, comprising:

transmitting an access request to access a server in the network, receiving a subscriber request for a subscriber identification associated with the access request see abstract (see fig. 1, col.3 line 8 to col.4 line 32 and col.5 line 13 to col.6 line 24, fig.2, col.8 line 10 to col.10 line 67 and col.11 line 13 to col.12 line 41).

transmitting the subscriber identification to the server and receiving, in response to the access request, incentive information reflecting available incentives corresponding to the subscriber B), wherein the server provides the subscriber identification to a host that selects and transmits the incentive information to the server based on at least on the subscriber identification (i.e., each community is identified by a text name and an identification number and has an associated port number through a interaction between a Community Client and a server, see fig.2, col.8 line 10 to col.10 line 67 and col.11 line 13 to col.12 line 41).

MacNaughton does not specifically disclose the identifying information to filter the available incentives based on an exclusion or inclusion list. However, Paul discloses a filter using inclusion and inclusion list (see abstract, figs.1, 6, col.3 line 20 to col.4 line 27 and col.8 line 17 to col.9 line 67). It would have been obvious to one of the ordinary skill in the art at the time the invention was made to implement Paul's teachings into the computer system of MacNaughton to eliminate unsolicited information because it would have enabled users to eliminate unwanted messages or data information (see Paul's col.2 lines 2-48).

As to claim 9, MacNaughton discloses providing a browser enabling a user to formulate and transmit the access request (see co1.5 lines 14-67).

As to claim 10, MacNaughton discloses receiving selected incentive information reflecting a server identification associated with the server, wherein the server provides the server m to the host for selection of the incentive information (see co1.7 line 48 to co1.9 line 27, co1.10 lines 12-67 and col.11 lines 13-51).

Claims 11-20 are rejected for the same reasons set forth in claims 1-10 respectively.

As to claim 21, MacNaughton discloses a system for distributing information in a network, comprising:

a host server (18 fig. 1) having at least one of an incentive distribution module and an account creation module accessible to a plurality of subscribers, a plurality of network servers (24, 28, 32 fig. 1) coupled to and selectively accessible to the host server for providing identification of on at least on the subscriber identification and server identification to the host (i.e., each community is identified by a text name and an identification number and has an associated port number through a interaction between a Community Client and a server receiving data corresponding to subscribers, see abstract, fig. 1, co1.3 line 8 to co1.4 line 32, co1.5 line 13 to co1.6 line 24 and col.9 lines 1-41).

at least one client machine coupled to and selectively accessible to at least one of the network servers for accessing network documents, wherein when at least one subscriber causes the client machine to access one of the network servers, the accessed network server communicates with the host server to obtain data

Art Unit: 2155

corresponding to the subscriber for presentation to the at least one subscriber, and wherein the at least one client machine is adapted to present from the host for at least one (see col.6 line 25 to col.7 line 61, col.8 lines 10-65 col.8 line 10 to col.10 line 67 and col.11 line 13 to col.12 line 41).

MacNaughton does not specifically disclose the identifying information to filter the available incentives based on an exclusion or inclusion list. However, Paul discloses a filter using inclusion and inclusion list (see abstract, figs.1, 6, col.3 line 20 to col.4 line 27 and col.8 line 17 to col.9 line 67). It would have been obvious to one of the ordinary skill in the art at the time the invention was made to implement Paul's teachings into the computer system of MacNaughton to eliminate unsolicited information because it would have enabled users to eliminate unwanted messages or data information (see Paul's col.2 lines 2-48).

Response to Arguments

4. Applicant's arguments with respect to claims 1-21 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

5. Claims 1-21 are *rejected*.

Art Unit: 2155

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Khanh Dinh whose telephone number is (703) 308-8528. The examiner can normally be reached on Monday through Friday from 8:00 A.m. to 4:00 P.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Alam Hosain, can be reached on (703) 308-6662. The fax phone number for this group is (703) 872-9306.

A shortened statutory period for reply is set to expire THREE months from the mailing date of this communication. Failure to respond within the period for response will cause the application to become abandoned (35 U.S. C . Sect. 133). Extensions of time may be obtained under the provisions of 37 CFR 1.136(A).

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 305 -9600.
